

Transcribe

Unisoft's Transcribe is a free utility supplied with its GI Reporting Tool. It imports Endoscribe reports into the GI Reporting Tool's own database, and is usually carried out after the Unisoft "go live" date.

The Endoscribe reports can be viewed and reprinted from with the GI Reporting Tool, but so that users feel at home, they cannot be edited!

Unisoft's own reports can always be edited after they have been saved and printed, within a timeframe specified by the software's administrator.

Transfer Endoscribe™ data to Unisoft's G I Reporting Tool™
(Endoscribe is a registered trademark of Mediboss Pty Ltd)

Transcribe
Ver 2.00 Unisoft Computers Ltd 0208 367 2103

The Endoscribe data that will be transferred includes all patient demographics, the list of GPs, the names of the consultants and operators and, for the endoscopic procedures, the indications, diagnoses, instruments used plus the full body text of every report.

The Endoscribe data must first be imported, using Microsoft Access 2, into an empty database called 'source.mdb'. Full instructions are given in the user guide.

Once the process has been running for a while you will be given an estimate of the time it will take to complete. The process can be stopped at any time. When restarted, it will pick up from where it left off.
