

The "Magic" Audit Button

Basically a couple of clicks with the mouse and you produce sophisticated reports covering the main facets of the management of patients passing through the department. These include - the numbers of diagnostic procedures performed, inward referral patterns, timespan analyses of the patients' journeys through strategic points along the way, diagnoses analyses and age/gender distribution for cell types.

If you would like a demonstration or further information please call Unisoft on 0208 367 2103

Each report includes an Exception report listing the patients whose data appeared in the columns headed Missing or invalid dates.

You can also produce a list of, and count of, patients for whom an event - e.g. bronchoscopy, scan, diagnosis, discussion at MDT, (type of) treatment started - occurred within a given range of dates.
